

# Simple LIMS Software

*An affordable laboratory information management software for small labs*

You own a lab practically buried with paperwork and your current Excel worksheets are just about maxed out. If you have MS Office on your PC, we have the perfect solution: our **Simple LIMS Software**.

Simple LIMS Software is a simple and affordable Microsoft Access based LIMS (Laboratory Information Management System) software for small medical laboratories. This simple LIMS software is a genetic lab testing/management software serves in a variety of industries, and it is easy to use, configurable, and providing rapid deployment options to meet the needs of any small laboratory in their daily operations and customer order management. It is an OPEN SOURCE laboratory information management software that allows you to easily organize your order workflows and control your lab documents. This LIMS will help small labs enhance their existing lab operations, track processing data records, and we guarantee you will start seeing the benefits right away.

## What's a LIMS?

LIMS is software designed to electronically store laboratory data. It is the accepted standard for data storage and retrieval throughout the analytical laboratory industry. Though each commercially available LIMS has different features, LIMS allows you to manage a sample with your computer system, and record/retrieve results electronically.

## Why LIMS, we keep all our lab's data on paper, or we have already use spreadsheets

Paper records are easy to make, but when your lab start to accumulates the testing records, results and documents, it will be issues and this issues will become a problems... Excel spreadsheets are great helper, but workbooks require repetitive data entry to get whole testing data input (from customer samples to result and from results to invoice...).

## Well, LIMS is good, but we can't afford a LIMS which work for our lab...

If you are running a small lab, and you need to setup a LIMS for your lab management, but you don't have a big budget to build it up... We

understand that small labs also have unique requirements for a LIMS software that demand full capabilities without complexity. They want to see a quick return on investment.
